Test Manager | Test Automation Lead | Test Automation | Mobile Testing | IOS/Android

I have a broad background in testing, encompassing roles such as Test Manager, Test Automation Lead, Mobile testing salesforce, and expertise in various testing areas, including Regression, integration, End- to- end testing, performance testing, sanity testing, Verification Testing, and acceptance testing. My primary focus has been on automation. In my experience, I've Coordinated tests, crafted comprehensive test plans, managed test schedules, and overseen the Testing Defect Resolution (TDR) process. My true passion lies in test automation, and I eagerly embrace opportunities to automate tasks, whether it involves creating new frameworks or refining existing ones for continuous improvement. Additionally, I have a proven track record of building CI/CD test automation pipelines from scratch. I also bring valuable experience in testing applications for iOS and Android, often utilizing tools such as Playwright, Selenium, and Cypress

Skills & Certificates NET and Java development, JavaScript, Typescript, Python, Selenium web driver, Playwright, Cypress, Salesforce, BrowserStack, Appium, SOAPUI, HP UFT, TestComplete, Detox, IOS, Android, Emulator- Xcode, Automation Testing, AzureDevOps, Jmeter, Load testing (Java), SoapUI API Testing, Test rail, Mobile Testing, Groovy CI/CD: Jenkins, CircleCi, GIT, Test Management, Xray, Docker, Jest,

Professional Experience

Test Automation Engineer (Contractor) – Stockholm Dec 2023 – In Progress Volvo cars

As the Test Automation, I'm a member of the Retail Excellence cluster, where we deliver personalized retail consumer services. As part of the Lead2Order team, I'm responsible for testing front-end, Backend, Mobile testing, and salesforce testing improving both UI and Backend, I have Experience in Playwright automation testing using typescript.. Wrote and executed automated tests in Typescript/playwright for a browser-based application. Used GitHub as a code repository to clone, commit, and push the changes. Communicated with developers through all phases of testing to prioritize bug resolution. Experiences in using both emulator and simulator to develop functional testing in mobile, in iOS using playwright test automation framework

Test Lead – Stockholm April 2023 – Nov 2023 Leo Vegas Contractor

Spearheaded the establishment of team test strategies and workflows. Conducted thorough manual functional and non-functional testing for native apps. Managed integration testing and implemented UI automation frameworks. Ensured compliance testing and collaborated with external testing teams. bringing in the Innovation mindset within the team and implementing best practices across the team to move towards a Shift-Left approach and Measuring and reporting on Quality KPIs

Test Automation Lead Engineer (Contractor) – Stockholm Apr 2022 – Mar 2023 Ikano Bank

As the Test Automation Lead Engineer, I took charge of test operations for critical projects, carefully strategizing and overseeing test deployments. I organized testing efforts for complex initiatives and reported essential Quality Key Performance Indicators (KPIs). My expertise extends to testing on both IOS and Android platforms, where I optimized mobile devices to function as efficient ShoreWare extensions. Using Browserstack, I conducted thorough app testing. I held accountability for end-to-end testing across multiple team deliveries, continuously improving the software development life cycle. My role included ensuring that all deliverables met organizational standards by crafting comprehensive Test Plans.

Test Lead – Stockholm Nov 2021 – Mar 2022 Tata Consultancy Services Contractor

As the QA Process Developer at TCS, I led QA process development and enhancement, ensuring GDPR compliance. Collaborating with stakeholders and cross-functional teams, I crafted and executed comprehensive test plans. I also designed test automation frameworks and Robotic Process Automation solutions, proactively managed defect resolutions, assessed risks, debugged, performed regression testing, and verified defect fixes. My role allowed me to work with a diverse range of blue-chip clients, providing valuable hands-on experience and insights.

Test Automation Strategist & Implementor – Stockholm Aug 2021 – Oct 2021 Salesforce (POC)

Assigned to develop and implement an automated test framework for the Salesforce project, the goal was to align with the client's needs and best practices. This involved defining a Selenium Test automation framework to enhance scripting, scalability, modularity, process definition, reusability, and cost-efficiency. The outcome was a flexible testing framework utilizing TestNG for prioritization and execution control, along with the creation of data-driven tests.

Test Automation Lead – Stockholm Mar 2021 – Aug 2021 Joint Academy (Contractor)

As a Test Profile in an Agile Team, my role involves defining acceptance criteria, leading and guiding team members in testing efforts, and actively participating in daily stand-up meetings, grooming sessions, and retrospectives. During

planning, I oversee test planning, create test steps, and coordinate testing using Xray for release planning, particularly when there are feature dependencies with other teams. In the testing phase, I conduct Exploratory Testing for new features, create test cases based on acceptance criteria, and write tests for new and existing features. I ensure comprehensive testing on mobile devices (Android and iOS), perform automated regression tests using JavaScript/Detox, and execute them on a CI server, specifically CircleCI.

Test Lead Consultant (Contractor) – Stockholm Jan 2020 – Sep 2020 Paradox Interactive

As the Lead QA Engineer, my role encompasses overseeing all QA activities within a diverse cross-functional development team, comprising front-end (JS, React), Go, and C++ developers. We focus on the PDX Launcher, a desktop application available for OSX, Windows, and Ubuntu. This application empowers players to seamlessly manage their PDX games, mods, and game settings, ensuring a smooth user experience."

Test Architect (Contractor) – Stockholm Aug 2019 – Jan 2020 Storytel

In this role, I designed test architecture and strategies aligned with business requirements, while also offering recommendations for enhancing test reporting, automation, and execution processes. I collaborated closely with the QA team to establish a robust test case management system and provided support for both functional and non-functional testing efforts. Additionally, I took charge of maintaining the test automation framework and procedures, ensuring their efficiency. My responsibilities also included the development and enforcement of best practices in QA architecture.

Test Manager (Contractor) – Stockholm Jun 2019 – Aug 2020 Arvato System

I ensured quality assurance for project deliverables within Agile timelines, managing release requirements using SaaS. I established test environments, led the test team, defined testing scopes for each release, deployed and managed testing resources, and applied relevant measurements and metrics for the product and team. I also handled the planning, deployment, and management of testing efforts for various engagements.

Lead Test Automation Engineer (Contractor) – Stockholm Nov 2018 – Mar 2019 General Electric

I identified redundancy by creating defects and participated in the Defect Review Board (DRB). I performed necessary code changes to address issues, led model testing and verification testing, collaborated on risk assessments, and presented bug findings while working with lead automation testing.

Lead Test & Test Automation Engineer (Contractor) – Stockholm Mar 2018 – Nov 2019 Bisnode

As the Lead Test Automation Engineer, I specialized in integration testing, test automation, build and release automation environments, end-to-end testing, test planning, and test case creation. My responsibilities included front-end and functionality testing, as well as the automation of test scenarios for GUI and DDT testing.

Lead Test Automation Engineer – Stockholm Mar 2016 – Aug 2017 Sogeti AB (Permanent)

I served as a consultant at Sogeti for over two years, where I extensively worked on test automation across various testing methods. During my tenure, I held roles as a Test Automation Lead and Test Coordinator, gaining experience in both back-end and front-end testing.

Test Automation and Support Engineer (Permanent) – Stockholm Dec 2012 – Feb 2016 Beamon

I was accountable for web-based testing, encompassing GUI and API testing, and served as the technical escalation point for client support, reporting directly to the IT manager. I also collaborated closely with other QA team members to identify and resolve software issues from an end-user perspective.

Test Automation and Support Engineer (Permanent) – Stockholm Feb 2010 – Nov 2012 Beamon

I led a diverse team of internal and external resources, providing leadership and overseeing quality assurance. My responsibilities included coordinating test strategy development, project planning, scheduling, allocating test engineers to programs, ensuring test environment availability, generating test reports, communicating test status, and facilitating coordination of test activities.
